

V3: larger descriptive icons inside the cells, symptom/risk visuals, complete compact MED401 lecture coverage

Icon legend fecal-oral blood needle sexual perinatal incubation chronic serology PCR / genome vaccine / prevention drug bed rest jaundice vomiting fever dark urine pregnancy risk exam warning

Exam traps HAV/HEV fecal-oral; HAV no chronicity, HEV dangerous in pregnancy. HBV vaccine/HBIG; HBeAg = active replication/high infectivity. HCV commonly chronic, no vaccine, active infection = RNA PCR. HDV needs HBV HBSAg; superinfection is worse than coinfection. IgM = recent/acute; IgG = past exposure/recovery/immunity context
